

ZimVie Announces Launch of Two Next-Generation Dental Solutions in the United States

June 16, 2022

T3® PRO Tapered Implant and the Encode® Emergence Healing Abutment designed to optimize restorative care and aesthetics

WESTMINSTER, Colo., June 16, 2022 (GLOBE NEWSWIRE) -- ZimVie Inc. (Nasdaq: ZIMV), a global life sciences leader in the dental and spine markets, today announced the joint launch of the new, FDA-cleared T3® PRO Tapered Implant and Encode® Emergence Healing Abutment in the United States. The T3 PRO is the newest addition to ZimVie's family of dental implants and builds on the proven solutions of the T3 Tapered Implant. The Encode Emergence Healing Abutment builds upon ZimVie's 3-in-1 Encode Impression System which provides clear intraoral scans and aesthetics, and is designed for patient comfort and healing.

Both the T3 PRO and the Encode Emergence reflect significant innovation to ZimVie's previous products and promise an optimized implant experience for both dentists and patients. ZimVie will begin commercial rollout of these solutions in the United States, with an intention to expand to additional countries pending necessary regulatory approvals.

"We are excited to launch the next evolution in our T3 family of implants and Encode impression system, which has been used in more than two million implant restoration procedures to date," said Indraneel Kanaglekar, SVP and President of ZimVie Dental. "ZimVie is committed to providing innovative treatment options to improve patient care while partnering with dental professionals globally to advance dental technology and end-to-end workflow solutions."

Launched in 2013, ZimVie's T3 Implants have been used for more than two million implant procedures with clinically proven safety and performance^{1,*}. The T3 PRO's advanced design delivers high primary stability and allows for immediate function[†]. T3 PRO has a hybrid surface featuring the proprietary Osseotite® surface on the implant collar, which is also superimposed on the grit-blasted implant body. Not only have multiple long-term, independent clinical studies on the proprietary Osseotite surface demonstrated safety and performance², they have also demonstrated the effect of this surface in preserving crestal bone. The hybrid surface of T3 PRO along with the optional integrated platform switching design has also been shown to provide early and long-term peri-implant bone support^{3-6,‡}. Additionally, T3 PRO boosts surgical performance with modernized collar design for placement depth adjustment, and self-tapping threads for controlled insertion. These elements deliver an ideal torque profile and improved[§] tactile feel during placement.

With the advancement of digital dentistry, customized restorations have become the standard of care, and Encode Emergence technology simplifies the digital workflow. The 3-in-1 healing abutment, impression coping, and scan-body provides efficiency by reducing the need for multiple abutment removals (dis/reconnects) in the treatment process while improving hard and soft tissue preservation⁷. Redesigned emergence profiles on the abutment facilitate natural gingival tissue healing for great aesthetics. With its intuitive, unique codes on the top surface and a matte appearance, the Encode Emergence Healing Abutment allows for clear intraoral scanning and great restoration precision. The pink color more closely matches that of the gingiva than uncolored titanium healing abutments, ultimately enhancing the patient's aesthetic appearance post-surgery.

For more information on the T3 PRO Tapered Implant and the Encode Emergence, or any of ZimVie Dental's solutions for restorative procedures, please visit <https://www.zimvie.com/en/dental.html>.

About ZimVie

ZimVie is a global life sciences leader in the dental and spine markets that develops, manufactures, and delivers a comprehensive portfolio of products and solutions designed to treat a wide range of spine pathologies and support dental tooth replacement and restoration procedures. The company was founded in March 2022 as an independent, publicly traded spin-off of the Dental and Spine business units of Zimmer Biomet to breathe new life, dedicated energy, and strategic focus to its portfolio of trusted brands and products. From its headquarters in Westminster, Colorado, and additional facilities around the globe, the company serves customers in over 70 countries worldwide with a robust offering of dental and spine solutions including differentiated product platforms supported by extensive clinical evidence.

* CER data (Pooled: 14 studies Publication range: 2014-2020)

†The T3 Pro Implants are intended for immediate function on single tooth and/or multiple tooth applications when good primary stability is achieved, with appropriate occlusal loading, in order to restore chewing function.

‡Pre-clinical and/or bench top studies are not necessarily indicative of clinical performance.

§Compared to previous generation T3 Implant in bench top studies
